

# Apply Transformer action

---

*Version 1.0.1, by Giorgio Bianchini*

**Description:** Applies the action performed by the Transformer module.

**Module type:** MenuAction

**Module ID:** `cdd01933-9e17-438a-ae45-57178e3d30cd`

This module definitively applies the action performed by the current Transformer module. This discards the information about the tree(s) that were originally loaded from the tree file. For example, if the tree file contained 1000 trees and the Transformer module computed the consensus tree out of them, using this module will discard the 1000 trees and only keep the consensus tree.

The tree with the Transformer action applied will be opened in a new window and you will have the option of keeping the window with the original tree open or closing it. The Further transformation, Coordinates and Plot action modules will be applied to the new tree as well.
