

Paste tree

Version 1.0.1, by Giorgio Bianchini

Description: Loads a tree from the clipboard.

Module type: MenuAction

Module ID: a916ad8e-2f22-439f-b764-8beb54673f7d

This module can be used to paste a tree from the clipboard.

Further information

When this module is invoked (by clicking on the button, or by using the keyboard shortcut), the text contents of the clipboard are saved to a temporary file, which is then opened using the installed File type and Load file modules. If the tree is in any known format (e.g. Newick or NEXUS format), these modules are able to load it. If the text in the clipboard does not represent a valid tree that can be read from any File type module, an error message is displayed.
