

# NCBI ASN.1

---

*Version 1.0.0, by Giorgio Bianchini*

**Description:** Opens a file containing a tree in the NCBI ASN.1 text and binary format.

**Module type:** FileType

**Module ID:** 27d3b548-0bfe-4c8d-99f6-e8111a20f019

This module adds support for the NCBI ASN.1 format (see [this link](#) for the formal definition of a tree object in this format, [this link](#) for more information about the format and the feature names with special meaning, and [this link](#) for more information about the ASN.1 standard in NCBI).

Trees in this format can be downloaded e.g. from the output of a BLAST search, and will include more information about the sequences other than their name (with respect to downloading the tree in Newick format).
