

Transform lengths

Version 1.0.0, by Giorgio Bianchini

Description: Transforms all the branch lengths in the tree.

Module type: FurtherTransformation

Module ID: f9241a42-c0cb-41a5-a1ee-a68fc339dee8

This module is used to transform the branch lengths of the tree, either by making them all equal, or by turning the tree into a cladogram.

Parameters

Transform

Control type: Drop-down list

Default value: All equal

Possible values:

- All equal
- Cladogram

This parameter determines what kind of transformation is performed. If the value is `All equal`, all the branch lengths are set to a value of `1`. If the value is `Cladogram`, the branch lengths are adjusted so that the tips are all contemporaneous and the tree looks like a cladogram (the length of the shortest branch in this case will be `1`).
